

TECHNICAL INFORMATION

Prolix® has been compared with them all! The results: There is no other product that even comes close. Test it for yourself, as this is the most important test to us here at ProChemCo!

You will find the elaborate testing that is currently being conducted by our competition is related to the use of their Petroleum products, which any Armorer or Gunsmith will concur, doesn't belong on any Firearm! Petroleum products only contaminate and create problems when they are used for cleaning, lubricating and "protecting" the tools of our shooting sports.

CLEANS: Prolix® is a penetrating solvent that has been developed over many years, used in industry, and rated the safest, most effective agent. Based on the new Citrus technology, it's Bio-Degradable and Ozone safe! ProChemCo took the results of "field testing" and modified the solvent for firearm usage; the end result improved effectiveness, while remaining nonabrasive and non-acidic. In short, it won't remove or harm your metal or wood finishes! We do recommend that you test on plastics, in a small area (on the back side). If no adverse action is noticed, you may continue with complete confidence. Total disassembly isn't necessary - an extra benefit of using **Prolix®**! The solvent seeks out dirt, oils, grime, etc. (even in small and impossible areas) and floats it away. The chemical action during cleaning develops the **DRY** lubricant and it is drawn into the pores of the material, creating a skin of protection.

LUBRICATES: Prolix®, as a lubricant, is unique and totally the result of "modern technology," is NOT affected by adverse conditions of extreme hot and cold (-80°F to over 460°F). It remains **DRY** to the touch. **Prolix®** appears thin, but testing has proven that the retained optimum amount of needed lubricant is provided. It won't wipe away during firing, flash or burn off, build up or become gummy, nor discolor (as

petroleum products turn yellow or brown). **Prolix®** will enhance and protect any metal or finish it is applied to. It comes from the bottle **BLUE** in color and almost clear on a patch. The **Prolix®** protective skin (film) renews itself each time used, and prevents contaminants from adhering or attaching, making follow-up cleaning easier! Penetration is made possible by its thin formulation (8.2 cps). Then by the chemical action, it turns into a heavier (68cST 40°C) **DRY**, enduring and long lasting protective coating. **Prolix®** was even rated next to the winner of a grease test!

PRESERVES: Prolix® has been proven by testing from the freezing conditions in ALASKA to the dusty wet TEXAS flat lands, to the damp humid jungles of SOUTH AMERICA - that it works! **Prolix®** preserves and protects due to its thorough cleaning and complete surface coverage. The penetration into the pores holds the Lubricant in place even in harsh use or long periods of storage. Its non-acidic base also prevents the chemical action of oxidation and seals out condensation and neutralizes rust.

Prolix® will not remove metal defects! **Prolix®** is a must for all blued, nickel, and stainless steel finishes! **Prolix®** is armor tough but yet works equally well on precision guns or the sophisticated law enforcement and military arms. **Prolix®** "#1 in Total Gun Care!" You can **DEPEND on Prolix®** . . . **OR YOUR MONEY BACK!!** Guaranteed!

ALL U.S.A. MADE!

"FIREARM SAFETY & PROFICIENCY BEGINS WITH PROPER MAINTENANCE and CARE . . . the **PROLIX® WAY**™."

IMPROVED
Bio-Degradable
"Ozone Safe"

PROLIX® LUBRICANT **#1 IN TOTAL GUN CARE**

We know you will find **PROLIX®** the most revolutionary hi-tech laboratory product developed exclusively for firearm maintenance and preservation. **Prolix®** is truly a new dimension in technology!

PROLIX® was extensively researched and laboratory tested to provide maximum cleaning potential while maintaining the optimum amount of retained lubricant.

PROLIX® cleans your firearm, lubricates it without the need of additional lubricants, but also preserves your firearm, preventing wood rot and deterioration.

PROLIX® Improves accuracy!

PROLIX® is an excellent wood preservative.

PROLIX® contains no grease, oils, silicones, or graphite to build up on your firearm, loading equipment, etc.

PROLIX® contains no petroleum based products, and therefore, when used regularly, will not "flash off or harm primers."

PROLIX® literally floats away powder and plastic shotshell residues, lead, and brass. Black powder is no longer a problem!

PROLIX® is **DRY** to the feel and its "ice blue" color enhances your firearms metal or finish.
